No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeate; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by

restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see

SOURCE INFORMATION:

http://genome.wustl.edu

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

(see http://www.hgsc.bcm.tmc.edu/docs/denbank_draft_data.html).

* NOTE: This is a "vorking draft, sequence. It currently

* NOTE: This is a "vorking draft, sequence. It currently

* consists of 47 contigs. The true order of the pieces

is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence

as soon as it is available and the accession number will

be preserved.

                             NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP there, //www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human thus; //www.sanger.ac.uk/HGP/Chr1

RP11-3J23 is from the library RPCI-11.1 constructed by the group of Pleter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9888 ATCCATGGAAATCTGCCC 9905
                                                                                                                                                                                                                                                                                                                                                                                                           IMPORTANT: This sequence is not the entire insert of clone Rp11-3/23 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone Rp4-63318 is at 103414 in this sequence. The true right end of clone Rp5-1115A15 is at 100 in this sequence. Location/Qualifiers

ACUU7U98 157650 bp DNA
Homo sapiens BAC clone RP11-443F16 from 2,
AC007098
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 157650)
Sulston, J.E. and Waterston, R.

Toward a complete human genome sequence
Genome Res. 8 (11), 1097-1108 (1998)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Center: Washington University Genome Sequencing Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as soon as it is available and the accession number
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 6178: contig of 6178 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       JOURNAL
                                                                                                                                                            source
                                                                                                                                                                                             The clone sequenced to the right is RP11-511111, 200 bp overlap. Actual start of this clone is at base position 1 of RP11-443F16, actual end is at base position 157456 of RP11-443F16.
                                                                                                                                                                                                                                                                                                                                  The RPCT-11 human BAC library was made from the blood of one male donor, as described by Gsoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repears; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOURCE INFORMATION:

The Ashbya gossypii genome as a tool for mapping the ancient Saccharomyces cerevisiae genome Science 304 (5668), 304-307 (2004)
                                                                                                                                                                                                                                                                                                                 This is low coverage sequence generated to identify the complete set of genes and the gene order on this chromosome. Regions of low quality are identified. Before doing extensive work on any gene identified here the sequence should be confirmed.

Location/Qualifiers

WPI; 2003-221527/21.

Bacterial expression system for producing recombinant human uteroglobin for treating inflammatory and fibrotic conditions, comprises a synthetic gene which codes for human uteroglobin.

Claim 1; Page 33; 127pp; English.

The present sequence is that of oligonucleotide 1, which was used in the construction of a synthetic gene for the production of human uteroglobin (hUg) in bacteria. Oligonucleotides 1-4 (see ABZ58370-73) were used to assemble the coding strand and oligonucleotides 5-8 (see ABZ58374-77) the complementary strand. The gene was assembled by annealing and ligation of the oligonucleotides. Because mature native hUg has glutanic acid at its N-terminus, an initiator methionine was added to the N-terminus, and

   The invention relates to a bacterial expression system for the production of recombinant human uteroglobin (rhUG), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonucleotides appearing as ADL27626-ADL27629, and which further comprises Met-Ala-Ala at the N-terminus of the sequence. Also included are producing an rhUG master cell bank (comprising inoculating a suitable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            codon usage was optimised for expression in bacteria. In an example from the invention, the synthetic gene was cloned into plasmid pCG12 (see AB5258378) and recombinant hUG (see AB57259) was produced in Escherichia coli strain CG12. The invention relates generally to the production of recombinant hUG by bacterial expression, protein purification and scaled-up production according to current good manufacturing practices. The recombinant hUG is useful for the treatment of inflammatory and fibrotic
                                                                                                                                                                Bacterial expression system for production of recombinant human uteroglobin comprising synthetic gene or human cDNA sequence wh for human uteroglobin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; ss; recombinant human uteroglobin; rhUG; bacterial expression system; rhUG master cell bank; rhUG research seed bank; anti-inflammatory; secretory phospholipase A 2; fibronectin; respiratory distress; inflammation; fibrotic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          conditions, such as neonatal respiratory distress syndrome and bronchopulmonary dysplasia. It may also be used to treat conditions associated with elevated phospholipase A2 levels such as pancreatitis,
                                                                                                                             Claim 1; SEQ ID NO 1; 64pp; English.

conscious times a large scale fermenter with the incovalum formed from the cc step (c) to form a fermentation culture, incubating the fermentation culture within the large scale fermenter, incubating the fermentation culture within the large scale fermenter, adding an induction agent to the above fermentation culture), purifying rhNG, determining the potency of rNUG in a sample, measuring in vitro anti-inflammatory effect arising crom inhibition or blocking of secretory phospholipase A 2 enzymes by cc from inhibition or vitro binding of rNUG to fibromectin, determining the potency cc purity of rNUG, and a pharmaceutical composition comprising a purified cr hVG and a carrier or diluent. The bacterial expression system is useful cod drug substance. rNuG is safe to administer to a patient in respiratory cc distress. The rNUG is useful for treating inflammation and fibrotic construct the synthetic rNUG gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                construction of a synthetic gene for the production of human uteroglobin (hUG) in bacteria, Oligonucleotides 1-4 (see ABZS8370-73) were used to assemble the coding strand and oligonucleotides 5-8 (see ABZS8374-77) the complementary strand. The gene was assembled by annealing and ligation of the oligonucleotides. Because matture native hUG has glutamic acid at its CC whereinus, an initiator methionine was added to the N-terminus, and code usage was optimised for expression in bacteria. In an example from the invention, the synthetic gene was cloned into plasmid pcG12 (see ABZS8378) and recombinant hUG (see ABZC8378) was produced in Escherichia CC coli strain CG12. The invention relates generally to the production of recombinant hUG by bacterial expression, protein purification and scaled-cup production according to current good manufacturing practices. The recombinant hUG is useful for the treatment of inflammatory and fibrotic conditions, such as neonatal respiratory distress syndrome and conditions, such as neonatal respiratory distress syndrome and conditions as accorded with elevated phospholipase A2 Levels such as pancreatitis, accurate renal failure, rheumatcid arthritis and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The present sequence is that of oligonucleotide 8, which was used in the construction of a synthetic gene for the production of human uteroglobin

The invention relates to a bacterial expression system for the production of recombinant human uteroglobin (rhig), comprising a synthetic gene or human cDNA sequence which codes for human UG, constructed from the oligonuclectides appearing as ADI27628-ADI27629, and which further comprises Met-Ala-Ala at the N-terminus of the sequence. Also included

Example 1; SEQ ID NO 8; 64pp; English.

for human uteroglobin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC (hUG) in bacteria. Oligonucleotides 1-4 (see ABZ58370-73) were used to CC assemble the coding strand and oligonucleotides 5-8 (see ABZ5874-77) the CC complementary strand. The gene was assembled by annealing and ligation of the oligonucleotides. Because mature native hUG has glutamic acid at its CN-terminus, an initiator methionine was added to the N-terminus, and codon usage was optimised for expression in bacteria. In an example from CC the invention, the synthetic gene was cloned into plasmid pCG12 (see CABZ58378) and recombinant hUG (see ABP7259) was produced in Escherichia CC coli strain CG12. The invention relates generally to the production of recombinant hUG is useful for the treatment of inflammatory and fibrotic CC up production according to current good manufaccuring practices. The recombinant hUG is useful for the treatment of inflammatory and fibrotic CC conditions, such as meonatal respiratory distress syndrome and CC bronchopulmonary dysplasia. It may also be used to treat conditions CCC associated with elevated phospholipase A2 levels such as pancreatitis, CCC acute renal failure, rheumatoid arthritis and asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

Also included comprises Met-Ala-Ala at the N-terminus of the sequence. Also included comprises Met-Ala-Ala at the N-terminus of the sequence. Also included comprises Met-Ala-Ala at the N-terminus of the sequence. Also included comprises Met-Ala-Ala at the N-terminus of the sequence. Also included comprises Met-Ala-Ala at the N-terminus of the sequence. Also included comprises Met-Ala-Ala at the N-terminus of the sequence within a suitable coryopreservative to the bacterial culture to form a cryopreserved solution, transferring a portion of the carpopreserved solution to a cryopreserved solution, the carpopreserved solution to a cryopreserved method storing the cryovial at a temperature below -60 degrees C). Comprising an expression providing a production seed cell bank culture comprising providing a production seed cell bank culture form an inculating a large scale fermenter with the incoulum formed from the cryopreserved within the large scale fermenter, incubating the fermentation culture to induce the expression of ring and harvesting the fermentation culture to induce the expression of ring and harvesting the above fermentation culture) purifying ring, determining the potency of ring in a sample, measuring in vitro anti-inflammatory effect arising from inhibition or blocking of secretory phospholipase A 2 enzymes by ring and a carrier or diluent. The bacterial expression system is useful comprising a purified comprising a purified second of producing a ring research seed bank or a pharmaceutical grade ring classes. The ring is useful for treating inflammation and fibrotic diseases. The resent sequence is a non-coding strand oligonucleotide cused to construct the synthetic ring gene.

The invention relates to a novel retroviral vector, derived from a murin leukaemia virus (MLV) vector, which lacks viral coding sequences but which includes: (i) part of the non-coding sequence (I) of elongation factor 1 alpha (BF1a), as heterologous, gene-derived sequence, inserted upstream of the multiple cloning site, and (ii) a mutation, downstream of the splice acceptor, within (I). The retroviral vectors are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; elongation factor 1-alpha; retroviral vector; EF1a; murine leukaemia virus vector; MLV; elongation factor 1 alpha; gene therapy; interleukin-1 receptor antagonist; IL-1ra; PCR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           non-coding sequences derived from the human elongation factor I-alpha gene (EF lalpha, bases +773 to +1006), which can be effectively used in gene therapy due to it's high stability and expression. The Murine Leukaemia Virus (MIV)-derived retrovirus vector is modified by complete removal of the gag, env and pol genes to improve gene expression and virus productability. It is also modified to contain the non-coding portion of the EF lalpha gene upstream of a multi-cloning site (MCS). The present sequence represents a primer used in the methods of the present
                                                                                                                                                                                                                                                                                                                      08-SEP-2000; 2000KR-00053613.
                                                                                                                                                                                                                                                                                                                                                       08-SEP-2001; 2001WO-KR001515.
                                                                                                                                                                                                                                                                                                                                                                                         14-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                          WO200220810-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24-SEP-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene therapy vectors. They are safe, i.e. they can not form replication-competent retroviruses by homologous recombination, the heterologous intron ensures efficient expression of foreign genes and the specified mutation means that a proper balance between splicing efficiency and viral titre is maintained. Also a heterologous promoter can be inserted to increase viral titre in packaging lines derived from human cells. An additional promoter (or internal ribosome entry site) can be provided to allow expression of two or more genes. The present sequence represents a PCR primer used to make the retroviral vector of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nakagawa

sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids acids, vitamins, saccharides and organic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

The present invention provides a number of nucleotide and protein

The metabolic pathway proteins of the invention include enzymes involved in the lysine and methionine biosynthetic pathways. The polynucleotide sequences of the invention can be used for the large-scale production and/or modulation of expression of fine chemicals such as lysine and methionine. The sequences of the invention may be used to identify C. glutamicum and related organisms e.g. C. diphtheriae in a subject to detect diphtheria. AAS96073-AAS96132 represent C. glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding metabolic pathway proteins from Corynebacterium glutamicum, useful for producing methionine and lysine in Corynebacterim and Brevibacterium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; chromosome mapping; gene mapping; gene therapy; forensic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid CC encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding CC pathisense nucleic acid; (4) an antibody capable of specifically binding CC proliferation or the activity of a gene in an operon required for CC proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway (5) identifying a gene required for cellular proliferation or the biological pathway or a gene on which the test compound that inhibits cellular proliferation of a gene on which the test compound that inhibits proliferation of an CC organism acts; (9) manufacturing an antibiotic; (10) profiling a compound to antifying a profileration of the strains is present in a culture or collection of compound activity; (11) a culture composing strains in which the gene conduct is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of contentifying proteins or screening for homologous mucleic acids are useful for cellular proliferation to isolate candidate molecules for rational color or cellular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, cc their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia C coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational drug discovery programmes. The conclusions mucleic acid sequence is also useful to screen for homologous mucleic, acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent cd did not form part of the printed specification, but was obtained in the printed specification, but was obtained in

                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated occuries cacid; (2) a host cell containing the vector; (3) an isolated occuries acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cc proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation (8) compound's activity; (11) a culture comprising trains in which the gene compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of compound's activity in the target of a compound that inhibits proliferation of contraining an antibiotic; (10) profiling a strains; or (13) identifying the target of a compound that inhibits the gene of identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational contrained for cellular proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening homologous nucleic acids required contrained for proliferation in cells other than S. aureus, S. typhimurium, contrained in cellular proliferation of the printed specification, but was obtained in celectronic format directly from WIPO at
